Symbolic Linking

- On Win2000 machine "u3pc" we have the following mapped for account 02023: H:\ is the home directory of the 02023 account <-- all files should be saved here!!! (To map the drive from Daq to a U3PC select "Tools" then "Map Network Drive". The drive is on \\daq1\DAQ\03045) (you might need to select a "different user" and put in the windows password for user 03045).
- W:\ is a directory holding web pages for HiRA (and the experiment 02023 as well)
- you can make a symbolic link by ln -s /user/event3/02023/complete evt-data
